and very firm. The sweet flavor holds up well under storage. Avg. Fruit Time: Late June

Top Hat- A compact 24 inch plant that can be grown in a pot if given winter protection. It produces firm, dusky blue fruit that ripens in August. Self-pollinating. Avg. Fruit Time: Early August

Planting Instructions:

Plant blueberries 5 feet apart in rows 8 to 10 feet apart. They grow best in full sun best in a well-drained sandy loam, rich in organic matter. Clay soils can be made suitable for blueberries by adding peat moss, pine soil conditioner and sand. Blueberries like acidic soil with a pH range of 4.5-5.0. Do a soil test before adding any amendments.
