

TALL GARDEN PHLOX – Phlox paniculata

- Backlight** **New** \$9.99 / 30" tall / Gleaming white domes of pure white top contrasting dark green glossy foliage mid-summer. A Proven Winners selection.
- Cherry Cream** \$9.99 / 26" tall / Bushy mounds of very mildew-resistant foliage are topped with pure white flowers with hot-pink eyes from July-September.
- Fashionably Early Princess** **New** \$9.99 / 32" tall / Lilac-pink blooms with darker eyes. Glossy leaves, wide spreading habit. Shows color for most of the summer.
- Flame White Improved** \$9.99 / 20" tall / Vigorous compact plants are topped with noticeably fragrant pure white blooms with small green eyes. Better mildew resistance than it's predecessor.
- Glamour Girl** \$9.99 / 32" tall / Large panicles of vivid hot pink, fragrant flowers on purple stems. Bright green mildew-resistant leaves look nice and healthy all season. Excellent re-blooming and performance.
- Jeanna** \$8.99 / 48" tall / Rosy-lilac heads are large but the individual flowers are smaller than most named varieties. This plant has excellent mildew resistance as well as also having a strong fragrance that attracts butterflies by the hordes.
- Nicky** \$9.99 / 36" tall / Large deep magenta flower heads with a sweet fragrance. Dark flowers and foliage. A good re-bloomer and good mildew resistance.
- Nora Leigh** \$9.99 / 36" tall / Fragrant appleblossom-pink to white blooms with a darker raspberry eye. Light green leaves with broad creamy white margins. Reasonably mildew resistant.
- Opalescence** **New** \$9.99 / 28" tall / Flamingo-pink blooms with darker pink raspberry-red eyes. Blackish-green leaves.
- Star Fire** \$9.99 / 60" tall / Tall imposing clumps are topped with sweetly fragrant conical heads of large cherry-red starting in July. An R.H.S. Award of Garden Merit winner. Dark mildew resistant leaves.
- Ultraviolet** **New** \$9.99 / 36" tall / Deep magenta violet heads on dark bronzed foliage. A mildew resistant Proven Winners selection.

Tall Garden Phlox Culture: Phlox prefer rich, deeply worked moist but well-drained soil for best performance, as they are heavy feeders. Cutting back early bloom heads as they fade will promote re-bloom. Problems to watch for are mildew and red spider mite. If you spray roses, the same material will usually do for phlox. All the modern varieties we currently carry have shown to have above average mildew tolerance and probably will not need sprayed under good culture. These newer varieties are more heat tolerant as well enabling them to bloom all summer if not too dry. Divide clumps every 3-4 years to maintain vigor and flower power. Tall phlox are Indiana natives that used to occupy sunny moist areas usually aside creeks and streams.

CREEPING PHLOX – Phlox subulata

Creeping Phlox Culture: Creeping phlox are native creepers that form solid sheets of pink, magenta, purple, blue, white or striped bloom, some with contrasting eyes, typically in mid-April. They grow in sun or tolerate light shade but most importantly they need excellent drainage. Water well until established. The roots are very fine and burn easily so fertilize half strength, if at all. *All are in 4.5" pots and are \$4.99 each. A full flat of 10 of the same variety qualifies for a 10% discount.*

WOODLAND PHLOX a.k.a. WILD SWEET WILLIAM – Phlox divaricata and Stolonifera

Woodland Phlox Culture: A semi-evergreen shade loving native with spreading, stem-rooting habit. Shoots up showy, nicely fragrant blue, pink or white flowers in April and May. Generally low maintenance, it does appreciate moisture and prefers woody, well-drained soil. The plants are sold in the shade perennial section, \$5.99 each
